UNDERGRADUATE UNIVERSITY EXAMINATIONS

SCHOOL OF MANAGEMENT AND LEADERSHIP

DEGREE OF BACHELOR OF ARTS IN DEVELOPMENT STUDIES

BDS 208 : HEALTH AND DEVELOPMENT

DATE: 9TH AUGUST 2024

DURATION: 2 HOURS

MAXIMUM MARKS: 70

INSTRUCTIONS:

1. Write your registration number on the answer booklet.
2. **DO NOT** write on this question paper.
3. This paper contains **SIX (6)** questions.
4. Question **ONE** is compulsory.
5. Answer any other **THREE** questions.
6. Question **ONE** carries **25 MARKS** and the rest carry **15 MARKS** each.
7. Write all your answers in the Examination answer booklet provided.

QUESTION ONE

Read the Case Study below carefully and answer the questions that follow:

SUSTAINABLE DEVELOPMENT THEORY

Sustainable development has become a major global theme in response to the continued deteriorating environmental conditions in recent decades, engendering constant innovations in policy instruments, green technologies, and industrial models. These innovations have occurred in multiple waves to stimulate sustainability, ranging from international cooperation to local governance, and from advocating greener production models to enhancing people's awareness of the need for sustainability.

In developing countries, a massive sustainability campaign has accompanied rapid urbanization, which has also given rise to the construction of conceptual towns and cities (e.g., eco-cities and low-carbon cities). However, it seems likely that a large proportion of these projects will not only fail to fulfill their sustainable promises but also that the tremendous input of resources involved makes them actually good examples of anti-sustainability development models. While sustainability at the micro level is the key and very foundation of sustainable development, many projects simply provide new and greener city infrastructure, leaving local community governance and its members' way-of-life unchanged. Sustainability at the community level, therefore, is vital to the realization of sustainable development.

Sustainability is too broad a concept and would lose its foci without a proper definition in discussion. Mischen et al. gave a very clear and comprehensive definition of sustainability at the community level. They defined a sustainable community as one in which individuals and organizations are "functionally and socially connected" to provide various services to improve the health, educational conditions, and other material and spiritual well-being of community members through self-determination with shared collective resources in the community.

Sustainability at the **community level** relies heavily on a robust mechanism for allocating local resources and delivering services at a comparatively low cost. The state and market, and the combination of the two, are the most important means of

resource allocation and service delivery, in which the former stresses universality and equity with stronger government intervention and the latter highlights efficiency with an unrestrictive attitude towards the private sector. Nevertheless, communities have attributes that are neither suited to direct governance by the government nor the market because the residents in the same community constantly interact and are incentivized by a blend of economic self-interest and altruism for the community as a commonwealth. Therefore, if the mode of governance incorrectly designed, the market or state can easily become dominant at the community level, which is not enough to serve needs of the communities. Moreover, local governance can be many times more costly and less effective without suitable self-organization and public involvement.

Required:

- a) Discuss the importance of engendering constant innovations in policy instruments, green technologies, and industrial models. **(9 Marks)**
- b) Sustainability is too broad a concept and would lose its foci without a proper definition in discussion. Evaluate the idea of a sustainable community. **(10 Marks)**
- c) Explain the role of state and market in sustainable community. **(6 Marks)**

QUESTION TWO

- a) Today's public health practice requires multidisciplinary teams of public health workers. With example, discuss the effect of multidisciplinary of public health workers to the public. **(10 Marks)**
- b) Describe the liner stage of economic models. **(5 Marks)**

QUESTION THREE

- a) Expound on the targets of the following goals.
 - i) Decent work and economic growth **(5 Marks)**
 - ii) Good health and well-being **(5 Marks)**
- b) Discuss the theory of sociocultural factor in relation to health. **(5 Marks)**

QUESTION FOUR

- a) Using appropriate examples, discuss as an expert what activities are involved to identify people and groups at highest risk of human immunodeficiency virus (HIV) acquisition. **(9 Marks)**
- b) Research has shown that Psychological/emotional abuse is affecting most of the people in the world. Propose a remedy for psychological abuse. **(6 Marks)**

QUESTION FIVE

- a) Evaluate what comprise a strengthening Health System. **(9 Marks)**
- b) Examine three Policy prescriptions resulting from structuralist thinking. **(6 Marks)**

QUESTION SIX

- a) Demonstrate your understanding of appropriate developments. **(10 Marks)**
- b) Discuss who runs the following institutions.
- | | |
|--------------------|-------------------|
| I. Private Clinic | (2.5Marks) |
| II. Health centers | (2.5Marks) |
